GUIDE NAME: Dr. Ankur Agarwal

Relevance of Drug Abuse

- Drugs have the potential to alter brain function, which can result in addiction and various severe issues. Therefore, prevention is crucial. Initiating drug or alcohol use at a young age can significantly contribute to decreasing these risks.

- The likelihood of drug use significantly rises during transitional periods for adults, such as experiencing a divorce or losing a job.

- The dangers related to drugs and alcohol, including accidents, injuries, and violence, are especially pronounced among young individuals.

- Substance use can also disrupt the development of the adolescent brain.

PROJECT TOPIC: The Prevention of Drug Abuse Among Youth

INTRODUCTION

- Substance abuse prevention, often referred to as drug abuse prevention, is an initiative aimed at stopping substance use from beginning or mitigating the issues linked to the use of psychoactive substances. Prevention strategies can target the environment.

- A strategy which refers to as "environmental prevention" concentrates on altering to

  decrease both the availability and demand for substances.

- Drug abuse prevention, encompasses various sessions tailored to the person to assist in stopping or minimizing substance use. The duration needed for assistance can differ significantly based on several factors related to the individual.

- Drug abuse prevention, also termed substance abuse prevention, consists of initiatives designed to aid individuals in reducing or quitting substance use. These initiatives can vary based on the requirements of the individual and may include a diverse array of sessions.

- Prevention strategies should be tailored to the specific needs of the individual, which can differ from person to person. Efforts aimed at preventing substance use are primarily directed towards minors and young adults, particularly those aged 12 to 35 years. The substances usually addressed by these preventive initiatives include alcohol (which encompasses binge drinking, intoxication, and driving while impaired), tobacco (which involves cigarettes and various smokeless tobacco products), marijuana, inhalants (volatile solvents such as glue, gasoline, aerosol sprays, ether, as well as fumes from correction fluid and marking pens), cocaine, methamphetamine, steroids, club drugs (like MDMA), and opioids.

Literature Review

- Youth are designed to encourage abstaining from alcohol, illegal drugs, and the improper use of over-the-counter medications. These programs are distinct from treatment programs that cater to youths diagnosed with substance abuse issues. A multitude of strategies has been created to engage families, schools, and communities in helping children and teenagers cultivate skills and techniques to prevent or decrease drug abuse.

- Initiating substance use at an early age and engaging in heavy use can result in various negative outcomes. Risky behaviors associated with substance use include skipping school engaging in unsafe sexual practices, impaired driving, and involvement in violence. Moreover, harmful alcohol consumption is a primary risk factor for fatalities and disabilities among individuals.

- A review of the literature indicates that research examining the initial use of illicit drugs points to disruptions in normal child-parent relationships, lack of participation in organized groups, and limited effective peer connections as potential predisposing factors for some individuals beginning to use illicit substances.

- Further research examples of both legal and illegal drug use, associations with drug-using peers, and positive drug- played significant roles in the initial substance use of other individuals. It is emphasized that both theoretical frameworks and research should clearly differentiate between the various pathways leading to the onset of drug abuse, as distinct statistical analyses might be required for different groups within these pathways.

Objective of Drug Abuse

1. To offer precise information about various types of drugs, their impacts, and their legal classifications.

2. To enable students to make knowledgeable and responsible decisions concerning drug use.

3. To create a supportive space where students can freely talk about drug-related topics with their peers.

4. To foster a robust collaboration with local community organizations and healthcare professionals.

Methodology

- The approach to preventing drug abuse among young people includes a holistic strategy that features interventions supported by evidence and initiatives rooted in the community. Below are some essential elements of an effective approach:

1. Interventions Based on Evidence Family-focused strategies.

2. Community Initiatives Coalition efforts within the community.

- The research methodology involved analyzing literature, conducting in-person interviews, facilitating focus group discussions, and reviewing online resources. A random selection process was employed to identify 60 homeless individuals struggling with addiction for the purpose of questioning.

Questionare

1. 1. Have you ever consumed drugs for reasons other than medical purposes?

2. When you take drugs, do you ever combine multiple substances at once?

3. What is a possible short-term consequence of drug abuse?

4. What types of drugs are accessible? (You may select more than one option.)

5. What prompted you to start using drugs?

6. Which drugs are you currently using? (You can list more than one.)

7. How frequently do you consume drugs?

8. On what occasions do you tend to use drugs? For instance, before exams?

9. Has your drug use affected your friendships? Are you able to quit using drugs whenever you wish?

10. Have you experienced "blackouts" or "flashbacks" due to drug use?

11. Do you ever feel remorse or guilt regarding your drug use?

12. Do your spouse (or parents) ever express concerns about your drug involvement?

13. Has substance abuse caused any issues between you and your spouse or parents?

14. Have you lost friendships as a result of your drug use?

15. Have you overlooked your family due to your drug use?

16. Have you encountered difficulties at work because of drug abuse?

17. Do you find yourself neglecting your family because of your drug habits?

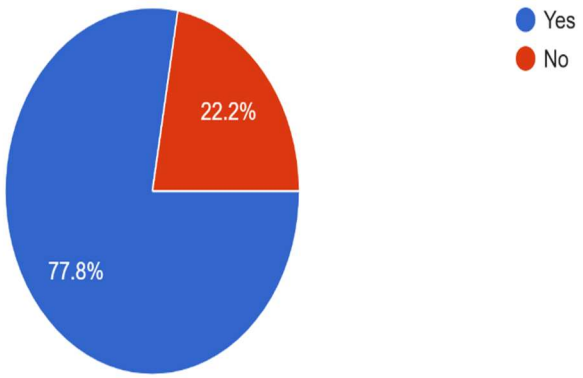
18. Have you tried to stop using drugs but failed?

19. Does your drug use lead to feelings of guilt?

Data Collection

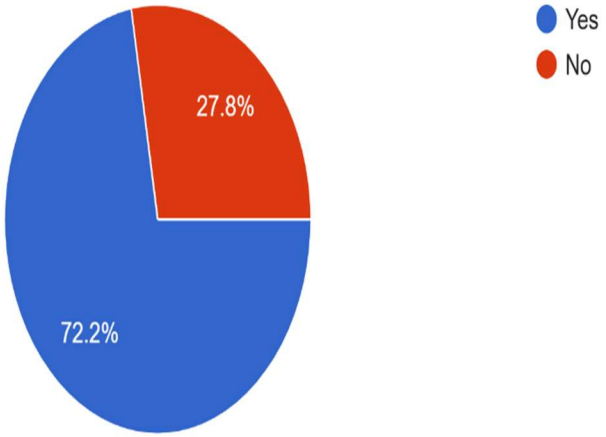
Do you ever use drugs for something other than a medical reason?

72 responses



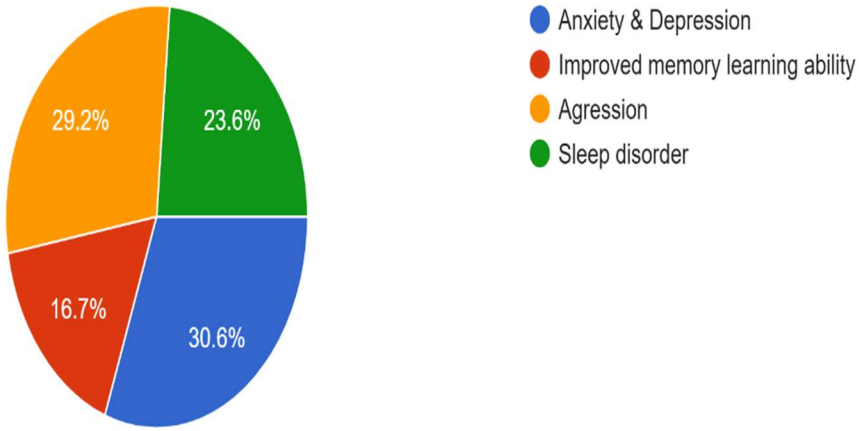
When you use drugs, do you use more than one drug at a time?

72 responses



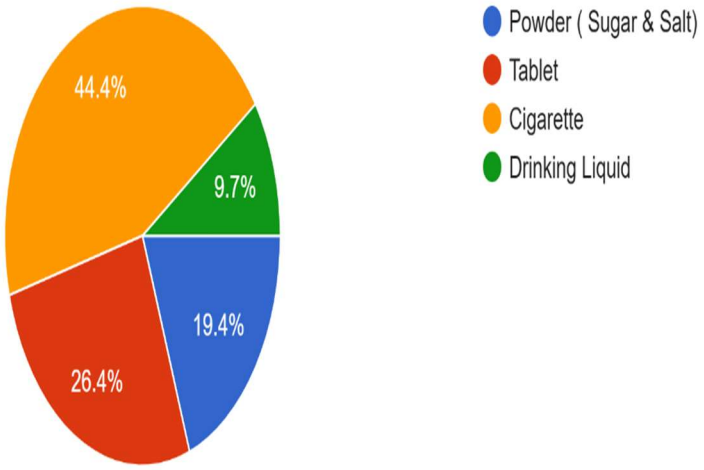
Which of the following is the short-term complication of drug abuse?

72 responses



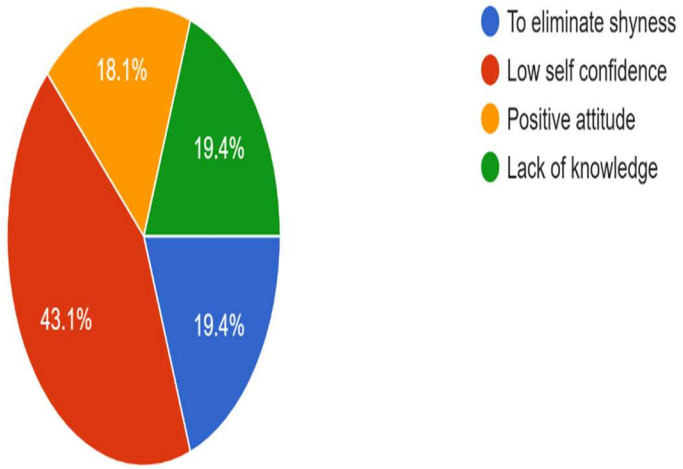
What form of drugs is available?

72 responses



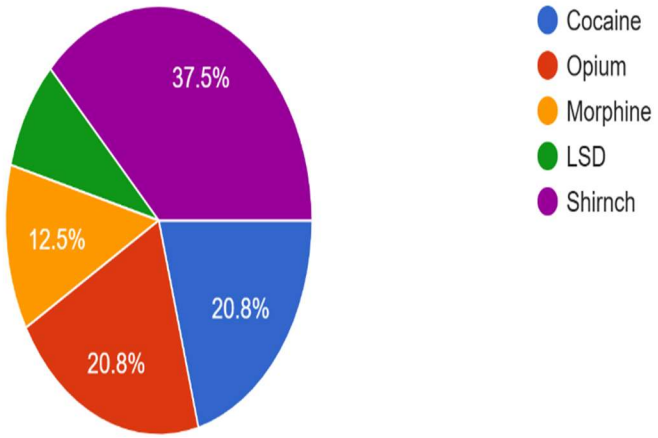
Why did you start using drugs?

72 responses



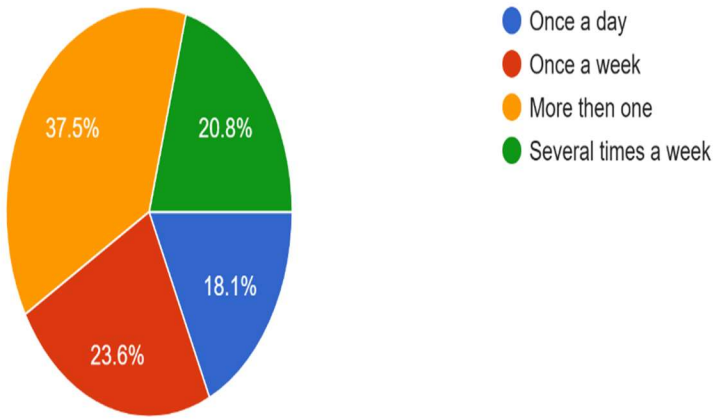
What drug do you use currently?

72 responses



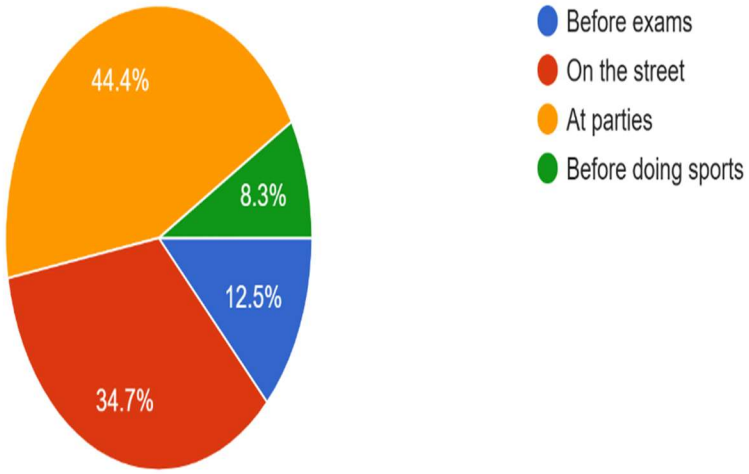
How often do you use drugs?

72 responses



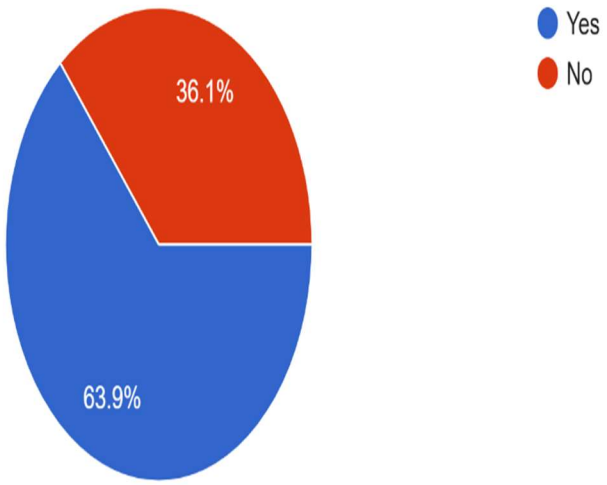
In what occasions do you use drugs?

72 responses



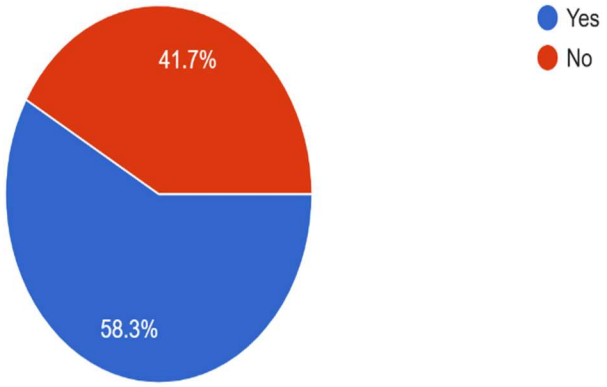
Has your drug use ended relationships with friends?

72 responses



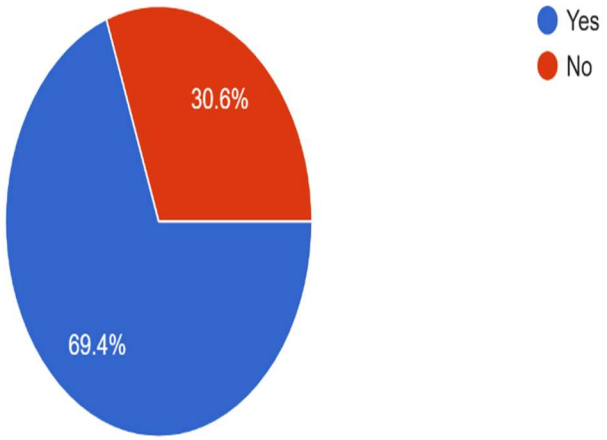
Do you find yourself neglecting your family because of your drug use?

72 responses



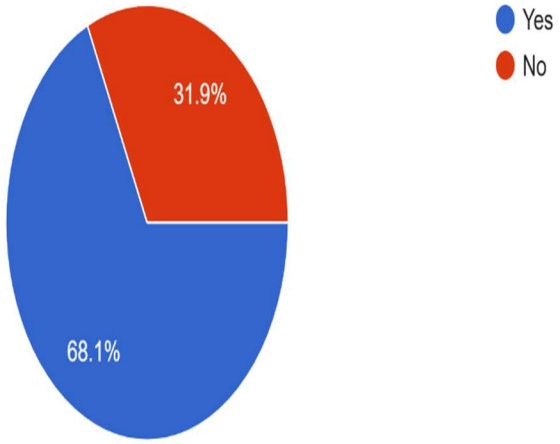
Have you attempted to quit your drug use but been unsuccessful?

72 responses



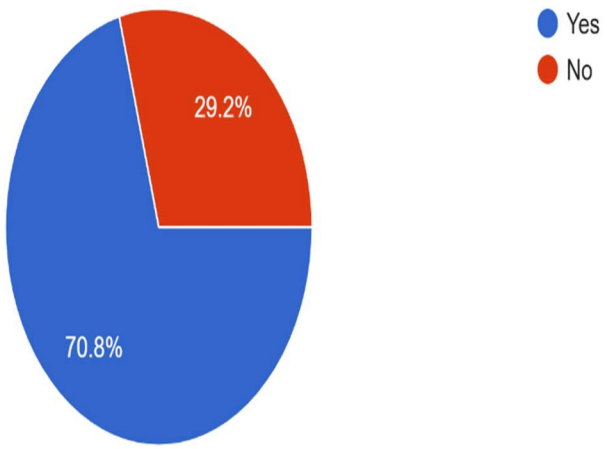
Does your drug use cause feelings of guilt?

72 responses



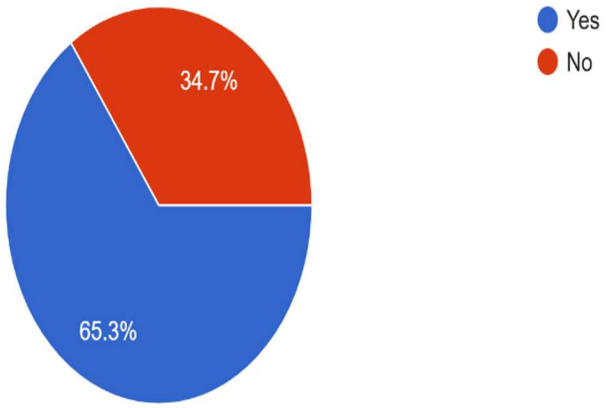
Are you always able to stop using drugs when you want to?

72 responses



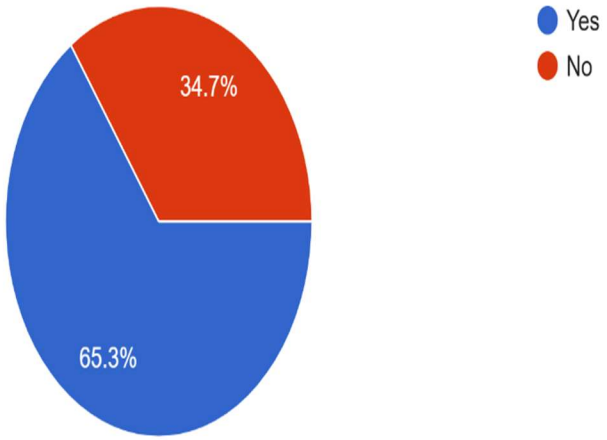
Have you had "blackouts" or "flashbacks" as a result of drug use?

72 responses



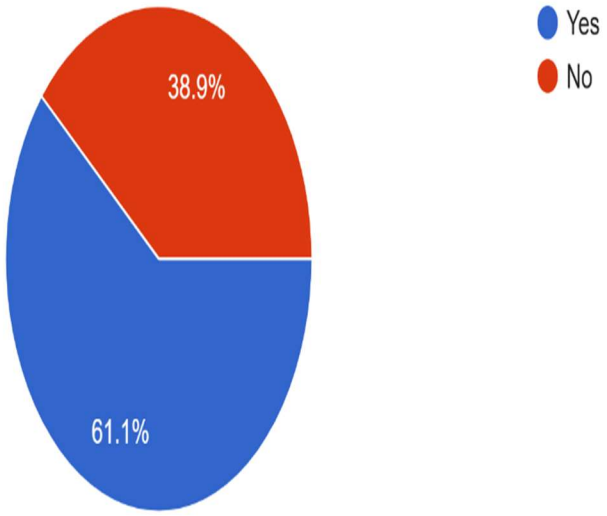
Have you had "blackouts" or "flashbacks" as a result of drug use?

72 responses



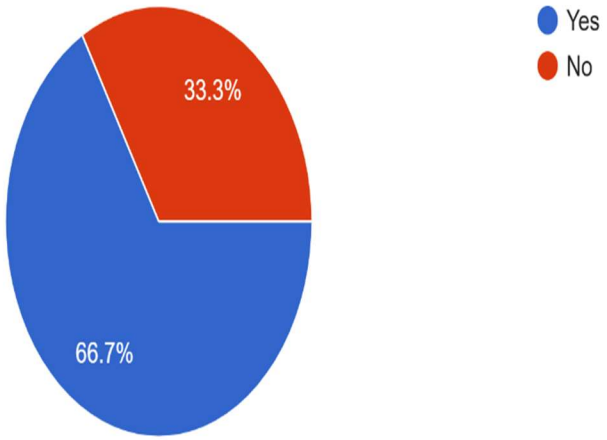
Do you ever feel bad or guilty about your drug use?

72 responses



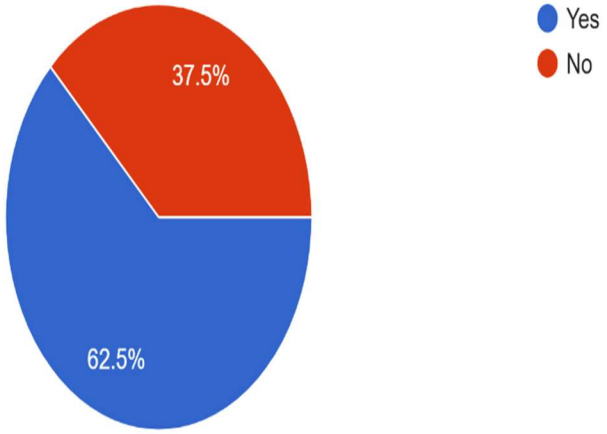
Does your spouse (or parents) ever complain about your involvement with drugs?

72 responses



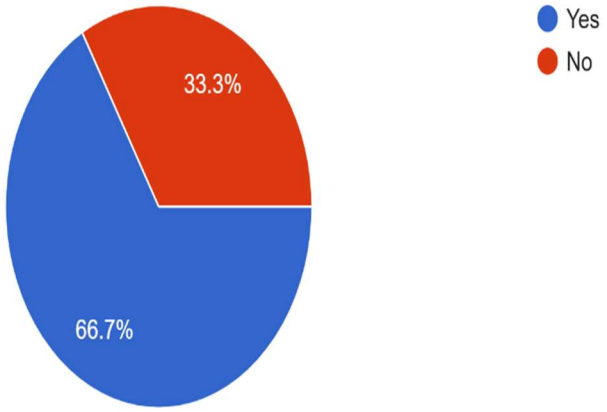
Has drug abuse created problems between you and your spouse or your parents?

72 responses



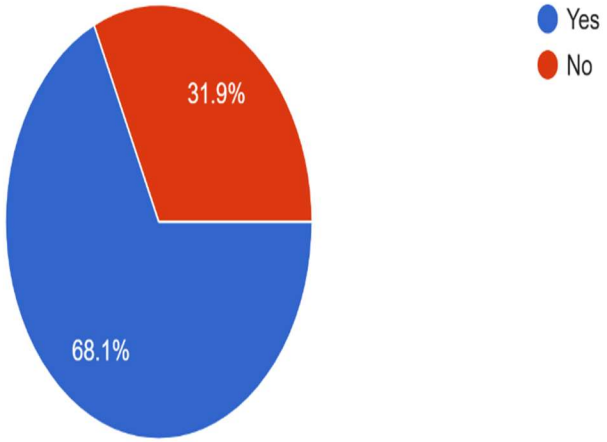
Has drug abuse created problems between you and your spouse or your parents?

72 responses



Have you been in trouble at work because of drug abuse?

72 responses



Have you been in trouble at work because of drug abuse?

Conclusion

To sum up, combating drug abuse among young people necessitates a holistic strategy that includes education, proactive intervention, and community involvement. By raising awareness about the risks associated with drug use, offering positive coping strategies, and nurturing strong support networks within families, educational institutions, and local groups, we can decrease the chances of youth resorting to drugs. Furthermore, it is essential to tackle fundamental problems such as mental health challenges, peer pressure, and societal influences. Establishing a setting where young individuals feel appreciated, supported, and empowered can significantly contribute to disrupting the cycle of addiction and securing a healthier, drug-free future for the upcoming generation..
